

## Dataset

Firstly, I have downloaded 215 images for my dataset.

When I try to use the PinDown plugin to download images in Pinterest, the PinDown plugin does not work. I chose to use the Fatkun plugin on the Pinterest site to download images.

I downloaded some images about cats, rabbits and tigers as my dataset.

Cat

Rabbit

Tiger

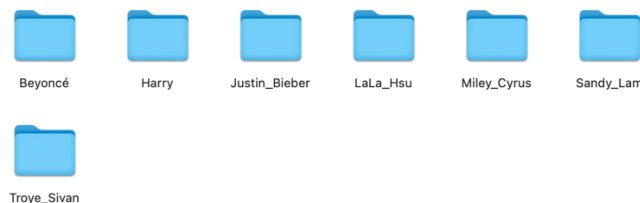

I uploaded this unlabelled dataset to the UAL sharepoint (<https://artslondon->

[my.sharepoint.com/personal/m\\_liang0620221\\_arts\\_ac\\_uk/\\_layouts/15/onedrive.aspx?view=0](https://my.sharepoint.com/personal/m_liang0620221_arts_ac_uk/_layouts/15/onedrive.aspx?view=0) ).

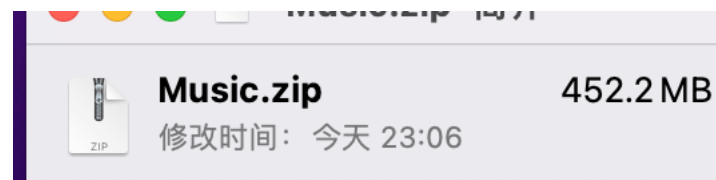

However, when I wanted to create my mini project. I created this music dataset to help build my mini project. Although I only chose five songs from the dataset to create mini project and used five gestures to control the performance of the five songs at the end.

Download music from <https://tools.liumingye.cn/music/#/>.

I downloaded 204 songs of Sandy Lam (24), LaLa Hsu (21), Adele (18), Beyoncé (13), Harry (20), Justin Bieber (76), Miley Cyrus (14) and Troye Sivan (18). And put these songs in a file (named Music).

Although I have compressed the folder, it is still 452.2MB, so I have chosen "Harry" as the sample.

I uploaded this unlabelled sample dataset to the UAL sharepoint ([https://artslondon-my.sharepoint.com/personal/m\\_liang0620221\\_arts\\_ac\\_uk/\\_layouts/15/onedrive.aspx?view=0](https://artslondon-my.sharepoint.com/personal/m_liang0620221_arts_ac_uk/_layouts/15/onedrive.aspx?view=0) ).

In the future, I will be looking at how to create more gestures to play songs from the dataset. And thus improve the music player.
